

# 5 EASY WAYS TO SUPPORT BEES

## 1. Reduce use of chemicals

Some common pesticides are immediately deadly to bees, others slowly weaken the colony over time and can lead to death. Before spraying, check with your local beekeeper for suggestions on pollinator friendly products and best time to apply for pollinator safety.

## 2. Support pollinator habitat

What can you do to support habitat in your area? Pollinator projects can be found in cities, neighborhoods, schools...get involved!

## 3. Grow plants for pollinators!

Take full advantage of bloom season and select a wide variety of flowering plants including native species. More gardens, less lawns!

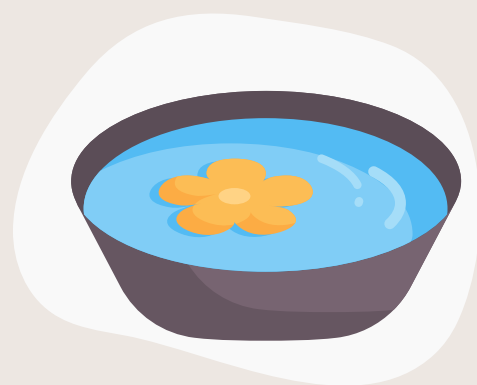

**100%  
ORGANIC**

## 4. Buy organic

When you buy organic food and apparel, you are keeping pollinators safe from pesticides.

## 5. Provide water

Place a shallow pool of water in your landscape to help keep bees hydrated and cool during the warm months.

**Becoming a PSC member is also a great way to support pollinators!**
